

FINAT

Empowering the label industry

National Associations Board

Meeting 23 January 2024

1. Meeting Guiding Principles
2. Minutes 12 April 2023
3. FINAT Activities (Jules)
4. CELAB-Europe Update (Ophelie)
5. Regulatory Affairs Update (Pablo)
6. Tour of Europe (All)
7. Other matters
8. Next meeting

FINAT

Empowering the label industry

1. GUIDING PRINCIPLES

- We are here to discuss relevant issues for FINAT members. For this purpose we have put together an agenda. We will stick to the agenda and limit our conversation and the exchange of information to what is strictly necessary to achieve the scope mentioned in the agenda.
- We remind you that companies that have attended this meeting remain competitors in the broader scheme of things and operate independently. Attendance here is conditioned on your assurance and ongoing compliance with the requirement that none of you discuss with each other your commercial terms with any of your customers or with your own suppliers (including, without limitation: prices, rebates, freight, volumes, territories, or any other competitive or potentially competitive terms).
- We need to avoid and prevent the exchange of information or the entering into (formal or informal) agreements on matters such as (but not limited to): prices in the current market place (including any component of price, price levels, rates, discounts, rebates, costs etc.), allocating markets (by geography, product, customers), coordinating (pending or future) bid opportunities, jointly boycotting any customers or suppliers or distributors, current or future marketing plans or strategies (including production volumes), manufacturing or sales costs, R&D plans, sales forecasts, plans for territorial expansion or capital investment plans, or customer-specific detailed sales information or terms of contracts.
- The most important competition law do's and don'ts are also available at www.FINAT.com
- Further please always follow your company's internal antitrust and competition policies. We expect you to consult with, and follow, your own company's policies and any guidance you may have received.

FINAT

Empowering the label industry

2. MINUTES 12 APRIL 2023

FINAT

Empowering the label industry

3. FINAT ACTIVITIES

THE FOUR PILLARS OF FINAT AND ITS INNER CIRCLES 2023-2024

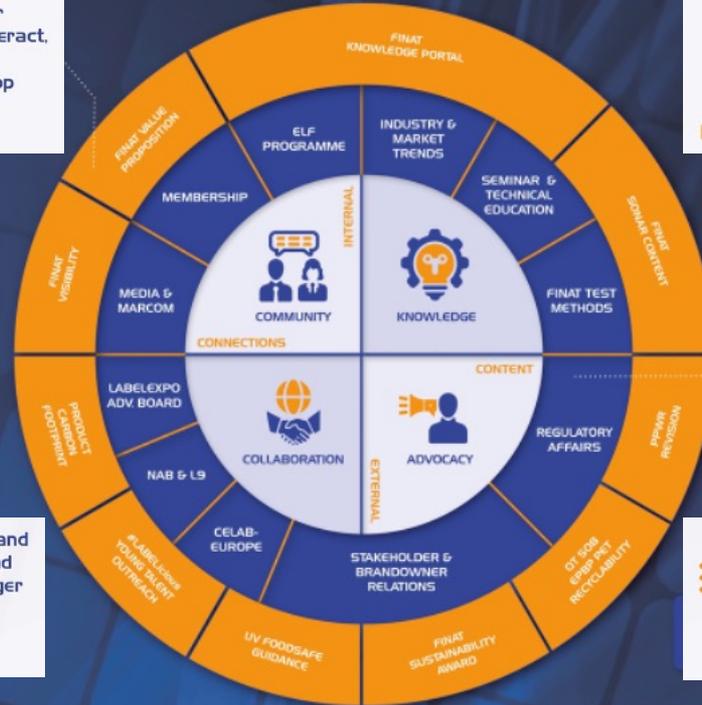

COMMUNITY

Providing a platform for members to connect, interact, network and maintain relationships and develop common understanding

KNOWLEDGE

Providing a first-hand knowledge and information hub with printed, digital, live and recorded content, industry data and standards

COLLABORATION

Serving as independent and compliant consortium and project facilitator/manager for FINAT led initiatives

ADVOCACY

Acting as voice of the European label community on matters like public affairs, stakeholder management, and participation in external initiatives

RECOUNTING FINAT'S TIMELINE TOGETHER

(65th Anniversary Edition)

1. Labels & packaging **essential component** of FMCG value chain
2. Growing **environmental concerns** in society due to climate change
3. Paris Climate Agreement, UN Sustainable Development Goals, EU Green Deal
4. Adoption of Environmental, Social & Governance (**ESG**) and Corporate Social Responsibility (**CSR**) as guiding principles
5. Growing demand for **objective, comparable and quantitative data** about environmental impact of products & processes
6. CSRD: **Corporate Sustainability Reporting Directive** entering into force in 2025 > corporations requiring harmonised data from SME suppliers
7. **Different calculation methods and tools** around, different interpretations
8. Need for **knowledge, understanding and guidance** among label converters

“Our clients are already asking for the CO2 balance of our labels and when we will be able to provide it. Do you have information you can provide us what the steps are to introduce it?....”

Save & increase forest area to capture greenhouse gases from the atmosphere

Hold average increase in global temperature to 2°C

Make finance consistent and aligned with Agreement goals

Limit temperature increase to 1.5°C

THE EUROPEAN GREEN DEAL
A climate-neutral Europe by 2050

Icons and text in the infographic include: BUILDING AND RENOVATING, FROM FARM TO FORK, A TOXIC-FREE ENVIRONMENT, PRESERVING ECOSYSTEMS AND BIODIVERSITY, USE SMART MOBILITY, USE RECYCLED MATERIALS, and icons for 17 Sustainable Development Goals.

THE GLOBAL GOALS
THE GLOBAL GOALS

- **Joint FINAT-TLMI project (2015, PRé Consultants, NL):**
“Towards Harmonized Life Cycle Assessment– Approach for the Self-adhesive Label Industry”

a.o.:

- An **LCA guidance document**, outlining the basics of LCA and its use;
- A **harmonized LCA approach** for the self-adhesive label industry, providing clear guidelines on how to conduct LCA studies;
- A **one-page summary of two case studies**, focusing on the key environmental impacts of self-adhesive labels

What?

LCA & PCF Introduction

- **INFORM** members about the basics of Product Carbon Footprint and Life Cycle Analysis
- **RELEASED Q4 2023**

How?

Standards and Tools

- **INVESTIGATE** and summarise the present Product Carbon Footprint calculation methods and tools relevant to the labels and packaging value chain
- **RELEASED Q1 2024**

What Next?

FINAT Standard

- **INITIATE** the possibility of alignment and/or harmonisation of Product Carbon Footprint calculation methods along the labels and packaging supply chain
- **TECH SEMINAR Q4 2024**

What?

LCA & PCF Introduction

- **INFORM** members about the basics of Product Carbon Footprint and Life Cycle Analysis
- **RELEASED Q4 2023**

LIFE CYCLE OF A PRODUCT
The full life cycle of a product includes the extraction or production of the product, use of the product and recycling or the disposal of remaining waste.

LCA (LIFE CYCLE ANALYSIS)
LCA is a methodology that calculates the resources and quality of life used and environmental impacts of a product, process or service. LCA considers not only the Greenhouse Gas Emissions but also the impacts on other resources which may include water and noise.

INDIVIDUAL CHALLENGES
LCA and PCF are both methodologies used to assess the environmental impact of a product or process. While LCA is a comprehensive approach, PCF is a more focused approach that only considers greenhouse gas emissions.

PCF (PRODUCT CARBON FOOTPRINT)
The PCF communicates the amount of greenhouse gas emissions that are produced or consumed during the life cycle of a product.

CRADLE TO LIFECYCLE STAGES
When evaluating PCF or LCA, it is important to identify what part of the life cycle of the product or process is being included in the evaluation. The following common approaches are used:

Introduction to PCF and LCA
PCF Product Carbon Footprint
LCA Life Cycle Analysis

• **RELEASED Q1 2024**

WHAT PCF STANDARDS/APPROACHES ARE OUT THERE? WHAT ARE THE DIFFERENCES AND RELATIONS OF THESE DIFFERENT TOOLS ?

Cycle Analysis

• **RELEASED Q4 2023**

How?

Standards and Tools

- **INVESTIGATE** and summarise the present Product Carbon Footprint calculation methods and tools relevant to the labels and packaging value chain
- **RELEASED Q1 2024**

LIST OF CO2 ASSESSMENT TOOLS, STANDARDS AND DATABASE FOR COMPARISON

WHAT IS IT?	APPROACH	COMMENTS	STANDARD	DATABASE	PRICING
Tool/Software	Ufvi Software	Provides essential LCA metrics and PPP for product specific footprints	PEF ISO 14047 / 14044 and ISO 14007	Sphera	- Is a good option for small companies - Is focused on the label industry providing generic info and secondary data - Is priced to direct customers
Tool/Software	Simpro	World's first open, applies impact assessment methods like ReCiPe, the Environmental methods like Aarex, IPCC, of USEtox 6 allows to create Simpro's own impact assessment method, including new substances or normalization and weighting sets.		Equipment 3.0/4, Agri-Forpact 6.3	- Pay to play - Can be tailored to FINAT needs in industry data 2.0
Tool/Software	Sphera Solutions	Expensive in packaging among other industries, and it's a working in using the tool		GaBi	- Pay to play - Experience with packaging industries
Tool/Software	SCOTT	BAEP has its own methodology to calculate PCF and uses the calculation tool SCOTT	ISO 14067/2018, ISO 14067/2020 and ISO 14067/2018 for LCA, WPCSD Chemicals and Plastic change have been used for decision making on lab-closure schemes	The company CarbonMind provides PCF datasets in line with BAEP methodology	only open to the market, use trial partners (persons mentioned below)
Tool/Software	CarbonMind	LCA Consulting		Simpro, Open LCA, Ufvi, and Inflow.	- BAEP granted a license to use their dataset, listing in the chemical industry
Tool/Software	Umbraco	Used by some chemical companies. Eg BAEP	ISO 14067, GHG Protocol and PAS 2050	Equipment & Carbon Mind	- Pay to play
Tool/Software	Open LCA			LCA offers the largest collection of datasets and database worldwide for LCA software, come for purchase, some for free, altogether almost 100,000 different data sets are available.	- Free or paid version available - Flexible to make a separate system
Tool/Software	ClimateCalc	Calculation tool that provides customers and manufacturers relevant information concerning the total carbon footprint of a given product right from cradle to gate. It is the only international standard in the world which has defined specific boundaries for carbon footprint calculations of printing companies and printed products.	Integral, ISO 14064-1, ISO 14075 and the International Green House Gas Protocol GHG Protocol	Not specific: https://www.climatecalc.eu/standards-and-datasets/	- focused on print and packaging products - Pay to play - A certification is needed to access the data, a certification results an annual audit from ClimateCalc.
Tool	Alcoblow	Management tool for LCA/PCF	ISO 14044/ISO 175		- focus on the chemical sector - Accurate primary data based model - BAEP granted their license under the PCF methodology
Tool	Piact	Integrated Software Solutions for Compliance and Sustainability. Measure, model, and improve the sustainability performance of products, supply chain, and operations.	ISO 14067, PAS 2050 and GHG Protocol	Leverage critical data from multiple processes, holistic view of external sources and internal sources and environment, on chemical etc.	- offers consulting services in an industry view - strong in the automotive and chemical industry - BAEP granted their license under the PCF methodology
Tool	Ecochain Hub			Equipment 3.0, Environmental Footprint 3.1 and the Czech National Manufacturing (NMZ)	
Standards	ISO 14000, ISO 14001, ISO 14004, ISO 14064, ISO 14067, ISO 14070	ISO 14067 can be used as a basis, as the first international environmental management standard available today. An ISO 14067 study may not only be based on a broader LCA study that is compliant with the ISO 14047 requirements.			- Pay to play - Most softwares are based on the ISO standards

What Next?

This is a step of decision making

- -How do we want to present the FINAT Standard?
- -What is the scope of the project?
- -Budget and time concerns?

FINAT Standard

- **INITIATE** the possibility of alignment and/or harmonisation of Product Carbon Footprint calculation methods along the labels and packaging supply chain
- **TECH SEMINAR Q4 2024**

- The #LABELicious competition started in 2019 as a Pan-European initiative, that encourages young talents to share their innovative and eco-friendly ideas for labels and packaging.
- The goal is to connect educational institutions with the label industry and to offer working opportunities for young professionals in this dynamic field.
- 3 award ceremonies held (2019, 2020 and 2022).
- The 2023 edition did not generate enough entries, hence deadline was postponed to mid 2024.
- Special [leaflet](#) disseminated at Labelexpo Europe.
- FINAT reached out to educational institutes (applied science or art schools) in Europe to assess interest in participation. If necessary, informative webinars can be organized.
- FINAT welcomes assistance NAB to help promote the competition.
- <https://labelicious.eu/>

- VsKE submitted a proposal to FINAT to:
 - Harmonize the parameters for self-adhesive material in technical documentations (data sheets listing the designation/specification of characteristics/materials and the associated units of the tests) so that data are comparable throughout the entire value chain.
 - Provide a unified voluntary protocol/form, listing all necessary and recommended data (characteristics/values) required in certain end-use markets to which all labelstock/laminate suppliers can agree.
- FINAT conducted survey among suppliers/manufacturers of labelstock materials.
- Suppliers agree to use FTMs but are hesitant to give requested values in product data sheet as some of the information is confidential.
- It is not meaningful to compare different labelstock materials using the mentioned test methods, as the influence of different materials can distort the measurement results.
- Not all FTMs are applicable or assumed to provide valuable information about label performance. Only FTM2 (peel adhesion) and 9 (loop tack) the details of which are regularly shared in product data sheets.
- As information in specification documents can only be negotiated between manufacturer and client, it is up to the parties to agree on and they are never open to the public
- There is no uniform ruling in the industry on which test methods are used to determine technical data.
- FINAT, as an independent body, cannot enforce the use of a unified data sheet.

- 22-24 May, Athens, Hotel Divani Caravel
European Label Forum 2024
- 20-22 November, Barcelona, Hotel NH
FINAT Seminar 2024
- One free ticket for President or Secretary
- *Converter* members national association at same rate as
FINAT members

FINAT

Empowering the label industry

4. CELAB-EUROPE UPDATE

Toward a Circular Economy for Labels

CELAB-Europe update

NAB meeting 23 Jan 2024

Prepared by Ophelie Gourdou (Sloop consulting), project coordinator

Summary:

CELAB Priorities 2024

Data Mining

1. Measure progress
2. Update the EU country heat maps of materials (volumes of used liner per site)

Logistics

1. Identify and validate collectors in white areas and for small volumes
2. Evaluate the potential of digital platform(s) waste materials sourcing
3. Get understanding of the supply chain end-to-end mapping

process

Recycling Solutions

1. Validate 1-2 paper liner recyclers in the white spots (UK, SP, IT)
2. Identify the gaps between the current recycling capacity (Panteia Study) and propose a strategy to grow the recycling capacity.
3. Compare the environmental impact of different end-of-life scenarios for the used liner (paper and PET)
4. Change the perception on the recyclability of the paper liner

Film & Matrix

1. Identify and validate recyclers for the matrix (paper & mixed)
2. PET liner recycling: Validate 1-2 PET recyclers in UK, FR, DE, SP, IT, PL

Communications

1. Educate label users on the liner recycling and motivate them to make their liner available for collection/recycling

Regulatory

1. Update reference documents
2. Continuous monitoring of the regulations

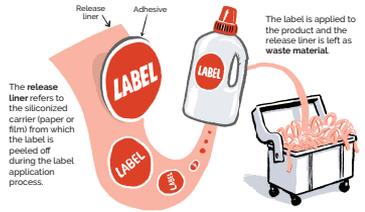

Release liner recycling infographic

Are you using self-adhesive (also known as pressure-sensitive) labels?
Contribute to the circular economy by recycling your used release liner!

Here's what you need to know:

1 What is a release liner and what can be recycled?

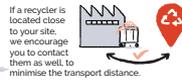

All types of used release liners can be recycled. The products of this recycling may include:

2 What should I do to get my used liner collected for recycling?

Contact the most relevant collection partner(s) to be found on the CELAB-Europe interactive map of solutions (see link below). You can filter the options by country and material type.

3 Is there a minimum quantity of used liner required for collection?

This depends on the collection/circularity partner and needs to be asked during your first contact with the collector.

Some collectors can accept very small quantities, so we recommend you contact several partners even if you have small volumes.

4 Does the material need to be handled in a specific way to be collected?

Not really. All you need to do is to separate it from the rest of the waste.

Most of the time, the collection partner will provide you with boxes that you can use to store the used liner until it is collected.

Your teams will need to be instructed how to sort the used liner and how to avoid contaminants like sticker remnants and foreign materials.

5 How much does it cost to get it collected?

Here as well, it will depend on the partner but also:

Quantity of material
Frequency of collection
Site location

Usually, collection costs are similar to or lower than general waste management costs. So, not only do you create less waste, but you generate cost savings as well.

6 How can I communicate the effort made to recycle the used liner?

Most of CELAB's partners deliver a certificate stating the quantity of material recycled during the year that can be published on your website or social media.

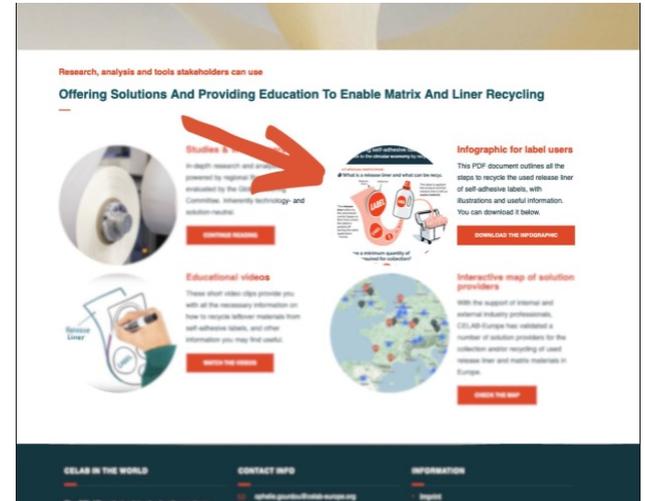

At CELAB-Europe, we are happy to publish testimonials of label users who participate in a collection and recycling program as well. So feel free to let us know and share your success stories!

Objective: answer all questions around the liner recycling in a one-page document

Target: label printers and their customers (label users)

Digital format in free access [on the CELAB website](#) – can be printed and handed over to the label users to promote the recycling of their used liner

➤ Translation needed?

CELAB Europe interactive map of solutions:
<https://celab-europe.org/resources/interactive-map-of-solution-providers/>
Contact us:
info@celab-europe.org

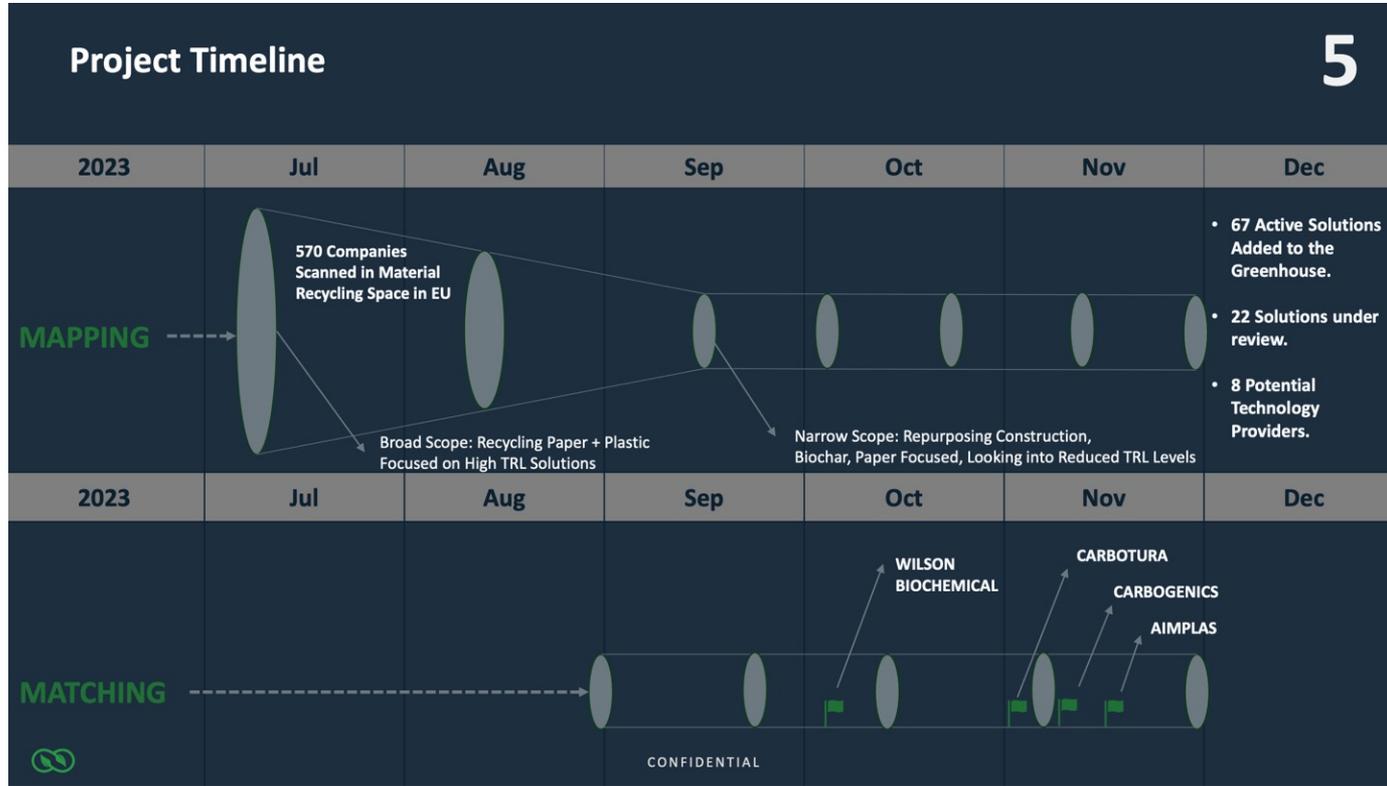

« Communication at each delivery »

- Pilot Test with Etivoet (label printer in B)
- Started mid of Jan'24
- Sticker with QR code on each delivery box
- Simplified interactive map with solutions in the relevant countries (F and BNL)
- Tracking of the results (number of webpage visitors, feedback questionnaire on the webpage, feedback from collectors)
- Decision to roll out the initiative to other label printers/countries after the test period

Matrix recycling – scouting with Ubuntu

Scope:
paper matrix or
mixed plastic and
paper matrix

Matrix recycling opportunities

6

Project Challenges & Opportunities

Project Challenges

- Complex multilayered nature
- One-stop-shop recycling/repurposing system that can accept all variations of the material.
- Logistical/ Transportation challenges.
- Material Capacity (tons/year)

How do we recycle/repurpose this material?

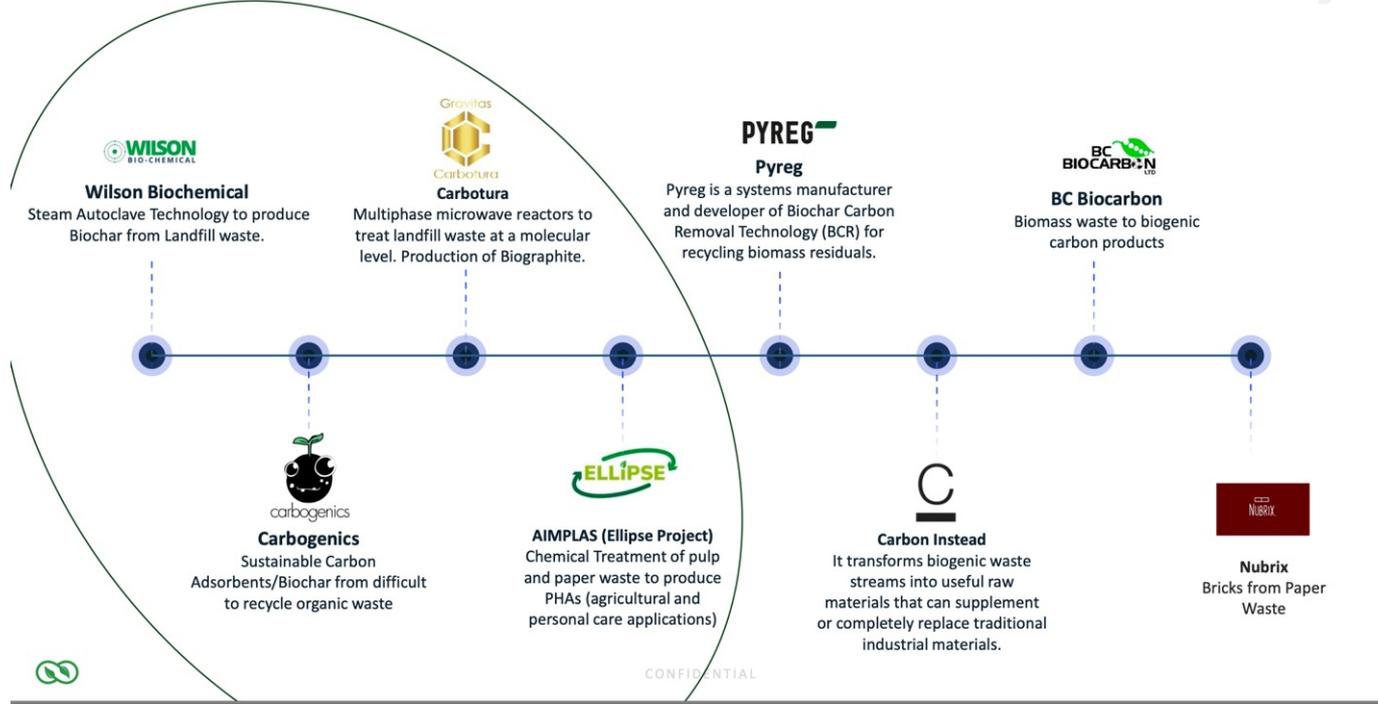

- Conventional Paper Recycling
- Landfill /Incineration (*out of scope*)
- Decking materials
- Biochar/Biographite/Biofuels
- Cement for Roads
- Other building Materials/Concrete

Matrix recycling – short list of solutions

Empowering the label industry

5. REGULATORY AFFAIRS

- **Art. 3: Definitions**

- Composite packaging: exclude labels, adhesives, coatings <10%
- *Recyclability*: collection, sorting, recycling at scale, substitute virgin materials
- *High quality recycling*: recovery enabling substitution of virgin materials
- *Home compostable packaging*: non-controlled conditions (cf. industrial composting)

- **Art. 5: Substances of concern**

- Microplastics (EP)
- Ban on PFAS, BPA from EIF+18 months (EP)
- Health & environment: REACH restrictions (Council)
- Re-use and recycling: DfR guidelines (Council)

- **Art. 6: Recyclable packaging**
 - DfR/Recycled at scale enforcement:
 - 3 years after Delegated Act by 1 Jan 2027 (EP)
 - Latest of 1 Jan 2030 or 2 years after Delegated Act by 1 Jan 2028 (Council)
 - Recyclability performance grades
 - EP: 5 acceptable grades (A-D, E < 70%)
 - Council: 3 acceptable grades (A-C + non-recyclable < 70%)
 - Council re-introduced Table 2a with some parameters for DfR criteria, including labels, sleeves, adhesives, colours, inks, printing...

- **Art. 7: Recycled content**

- Plastic part of packaging (unchanged)
- Calculation of targets
 - EP: *average per manufacturing plant, per year*
 - Council: *per packaging type and format, per manufacturing plant per year*
- Exceptions
 - EP: inks, adhesives, paints, varnishes and lacquers; plastic parts < 5%
- Bio-based plastics: to be evaluated

- **Art. 8: Compostable packaging**

- Labels attached to produce (unchanged)
 - EP: Industrially or home compostable
 - Council: Industrially compostable
- Other biodegradable packaging allowed, but needs to allow material recycling (unchanged)
- Timeline
 - EP: EIF + 36 months
 - Council: EIF + 24 months
- Update of EN 13432 (industrial composting)
- Development of standard for home composting

- **Art. 10: Reusable packaging**
 - Council: Minimum # trips/rotations
 - > 5 cardboard packaging
 - > 10 other materials
- **Art. 11: Labelling of packaging**
 - Material composition labels
 - Council: not home-compostable, not disposable in nature
 - Timeline: 24 months after Delegated acts
 - Reusable packaging labels
 - QR codes; *firmly attached and not erasable*

- [Annex XV report](#)
 - PFAS = CF_3-R or $R'-CF_2-R''$
- [RoI entry](#)
- ECHA presentation on CARACAL 16 November
 - 5600 feedback received from 4400 stakeholders from wide variety of sectors
 - 29 November RAC/SEAC discussed consultation input
 - Draft Restriction Regulation tentatively expected H2 2024, publication Q1 2025

- [Silicones Europe](#) issued joint letter to Commission on 22 November
 - Request Impact Assessment before proposing POP nomination
 - Offers meeting
 - 37 signatories (including SiEU members and downstream users)
 - Awaiting feedback
- Additional advocacy planned by Silicones Europe

- [Regulation \(EU\) 2023/1115](#) entered into force 29 June 2023
- Rules for placing and making available on the EU market
 - Cattle, cocoa, coffee, **oil palm, rubber, soya** and **wood**
- Commodities and products can be placed on the EU market if they:
 - Are deforestation-free
 - Have been produced in accordance with the relevant legislation of the country of production
 - Are covered by a due diligence statement
- **Status within national associations?**
